## Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

YEE & ASSOCIATES,

## Listing of Claims:

(Previously presented) A method for managing configuration information in a storage controller, the method comprising:

setting, by an operator, backup parameters that define how a backup operation will be executed; invoking a backup operation using the backup parameters; and responsive to a given event:

determining if a removable non-volatile memory module is connected to a first storage controller; and

responsive to the removable non-volatile memory module being connected to the first storage controller, executing the backup operation to store configuration information from the first storage controller to the removable non-volatile memory module.

- 2. (Canceled)
- (Previously presented): The method of claim 1, wherein the given event is a command that was 3. entered by an operator through one of interface software and a boot menu console.
- (Original) The method of claim 1, further comprising: 4. responsive to a restore event, restoring the configuration information from the removable nonvolatile memory module to the first storage controller.
- (Previously presented) The method of claim 4, wherein the restore event is a command that was 5. entered by an operator through one of interface software and a boot menu console.
- (Original) The method of claim 1, further comprising: 6. disconnecting the removable non-volutile memory module from the first storage controller.

p.29

- (Original) The method of claim 6, further comprising: 7. connecting the removable non-volatile memory module to a second storage controller.
- (Original) The method of claim 7, further comprising: 8. responsive to a restore event, restoring the configuration information from the removable nonvolatile memory module to the second storage controller.
- (Previously presented) The method of claim 8, wherein the restore event is a command that was entered by an operator through one of interface software and a boot menu console.
- (Original) The method of claim 7, further comprising: 10. determining whether the configuration information is compatible with the second storage controller; and

responsive to the configuration information not being compatible with the second storage controller, notifying an operator of incompatible configuration information.

- (Original) The method of claim 1, wherein the configuration information includes at least one of 11. configuration data, firmware, bootware images, and component summary data.
- (Previously presented) A storage controller, comprising: 12. a processor;

a memory electrically coupled to the processor;

an externally accessible socket interface, wherein the externally accessible socket interface provides an electrical connection to the processor;

backup parameters, set by an operator, that define how a backup operation will be executed; invoking means for invoking a backup operation using the backup parameters; and responsive to a given event:

determining means for determining if a removable non-volatile memory module is electrically coupled to the processor through the externally accessible socket interface; and

responsive to the removable non-volatile memory module being electrically coupled to the processor, executing the backup operation to store configuration information from the memory to the removable non-volatile memory module.

p.30

(Original) The storage controller of claim 12, wherein the externally accessible socket interface 13. is a Personal Computer Memory Card International Association card slot.

YEE & ASSOCIATES, P.C.

- (Canceled) 14.
- (Original) The storage controller of claim 12, wherein the configuration information includes at 15. least one of configuration data, firmware, bootware images, and component summary data.
- (Original) The storage controller of claim 12, wherein the removable non-volatile memory 16. module is a flash memory module.
- (Original) The storage controller of claim 16, wherein the flash memory module has a flash file 17. system format for storing data.
- (Previously presented) An apparatus for managing configuration information in a storage 18. controller, the apparatus comprising:

means for setting, by an operator, backup parameters that define how a backup operation will be executed;

means for invoking a backup operation using the backup parameters; and means, responsive to a given event, for:

determining if a removable non-volatile memory module is connected to a first storage controller; and

responsive to the removable non-volatile memory module being connected to the first storage controller, executing the backup operation to store configuration information from the first storage controller to the removable non-volatile memory module.

- (Original) The apparatus of claim 18, further comprising: 19. responsive to a restore event, restoring the configuration information from the removable nonvolatile memory module to the first storage controller.
- (Original) The method of claim 18, further comprising: 20. responsive to a restore event, restoring the configuration information from the removable nonvolatile memory module to a second storage controller.
